

Motorcycle Loader for Pickup Trucks

ABSTRACT

A motorcycle loading device and method for mounting said device to the attachment hardware for the removable tailgate on the bed of a pickup truck. The device is comprised of a structural support frame, mounting plates for the support structure, a telescoping ramp, and a gas spring damper to control the movement of the loaded ramp. The ramp and mounting plates provide for load sharing with the bed of the pickup truck. The constituent components of said device are designed so as to install on a conventional pickup truck without necessitating modification of said pickup truck or the use of tools to facilitate said installation
